# Outline

- Introduction (Motivation)
- Results:
  - ◆ Technical features and benefits
  - ◆ DEMO
- Conclusions
  - ◆ Limitations
  - ◆ Future Developments

# Introduction

- **Aim/Goal of this research:**
  - ◆ to “digitalize” the government’s interface, so as
  - ◆ to provide faster data to the public,
  - ◆ at less expensive delivery costs of 2001 Census data.
- **Method (...or ways to improve customer satisfaction):**
  - ◆ Since graphs (visualization) are better than tables,
  - ◆ Internet is better than printouts, and
  - ◆ drill-down is better than scrolling,

the basic strategy was to use SAS (<http://www.sas.com>) GRAPH with ODS to provide the Administrative Area/ Geographic Information System (AA/GIS) functionality
- **Tactic:**

After researching typical public usage behavior, the SW was used to develop

  - ◆ a logical search
  - ◆ logical comparison,
  - ◆ logical ranking, and
  - ◆ logical presentation of the 2001 Census Data

# Tables vs. Graphs

## e.g., Ethnic diversity table:

SAS Output - Microsoft Internet Explorer - [Working Offline]    EN English (United States)    Microphone    Tools    Handwriting    Drawing Pad

# Tables vs. Graphs

## Ethnic diversity map (w/out Croats):

# Results: Technical Features and Benefits of the Administrative Area GIS

- **Technical features:**
  - ◆ Developed using SAS base and GRAPH with ODS (Output Delivery System) and intensive macro programming (25+ macros)
  - ◆ New administrative borders (at the county/ municipality level) for the first time implemented and used in SAS GRAPH maps (based on coordinate data provided by Croatian Geodesic Institute)
  - ◆ 16 consult. days (design + development)
  - ◆ 1114 files (html [frame, content, body], gif)
  - ◆ 4000+ graphs (maps, bars, pies, pin charts, “pyramids”)
  - ◆ multiple links
  - ◆ No additional intervention in HTML code (generated by SAS ODS) was necessary
  - ◆ **Full national language support (čžš) available**

# Results: Technical Features and Benefits of the Administrative Area GIS

## ■ Benefits:

- ◆ Global view of demographic data (e.g., “diversity maps” for immediate insight)
- ◆ Easy comparison, ranking, and identification of percentages (e.g., % illiterate) by geographic region (counties, municipalities), by name, or by rank (using “4 graphs views”)
- ◆ Logical “drill-down” by geographic dimension (from counties to municipalities)
- ◆ Individual graphs (maps, bars, pies, pin-charts, “age pyramids”) are readily available for download

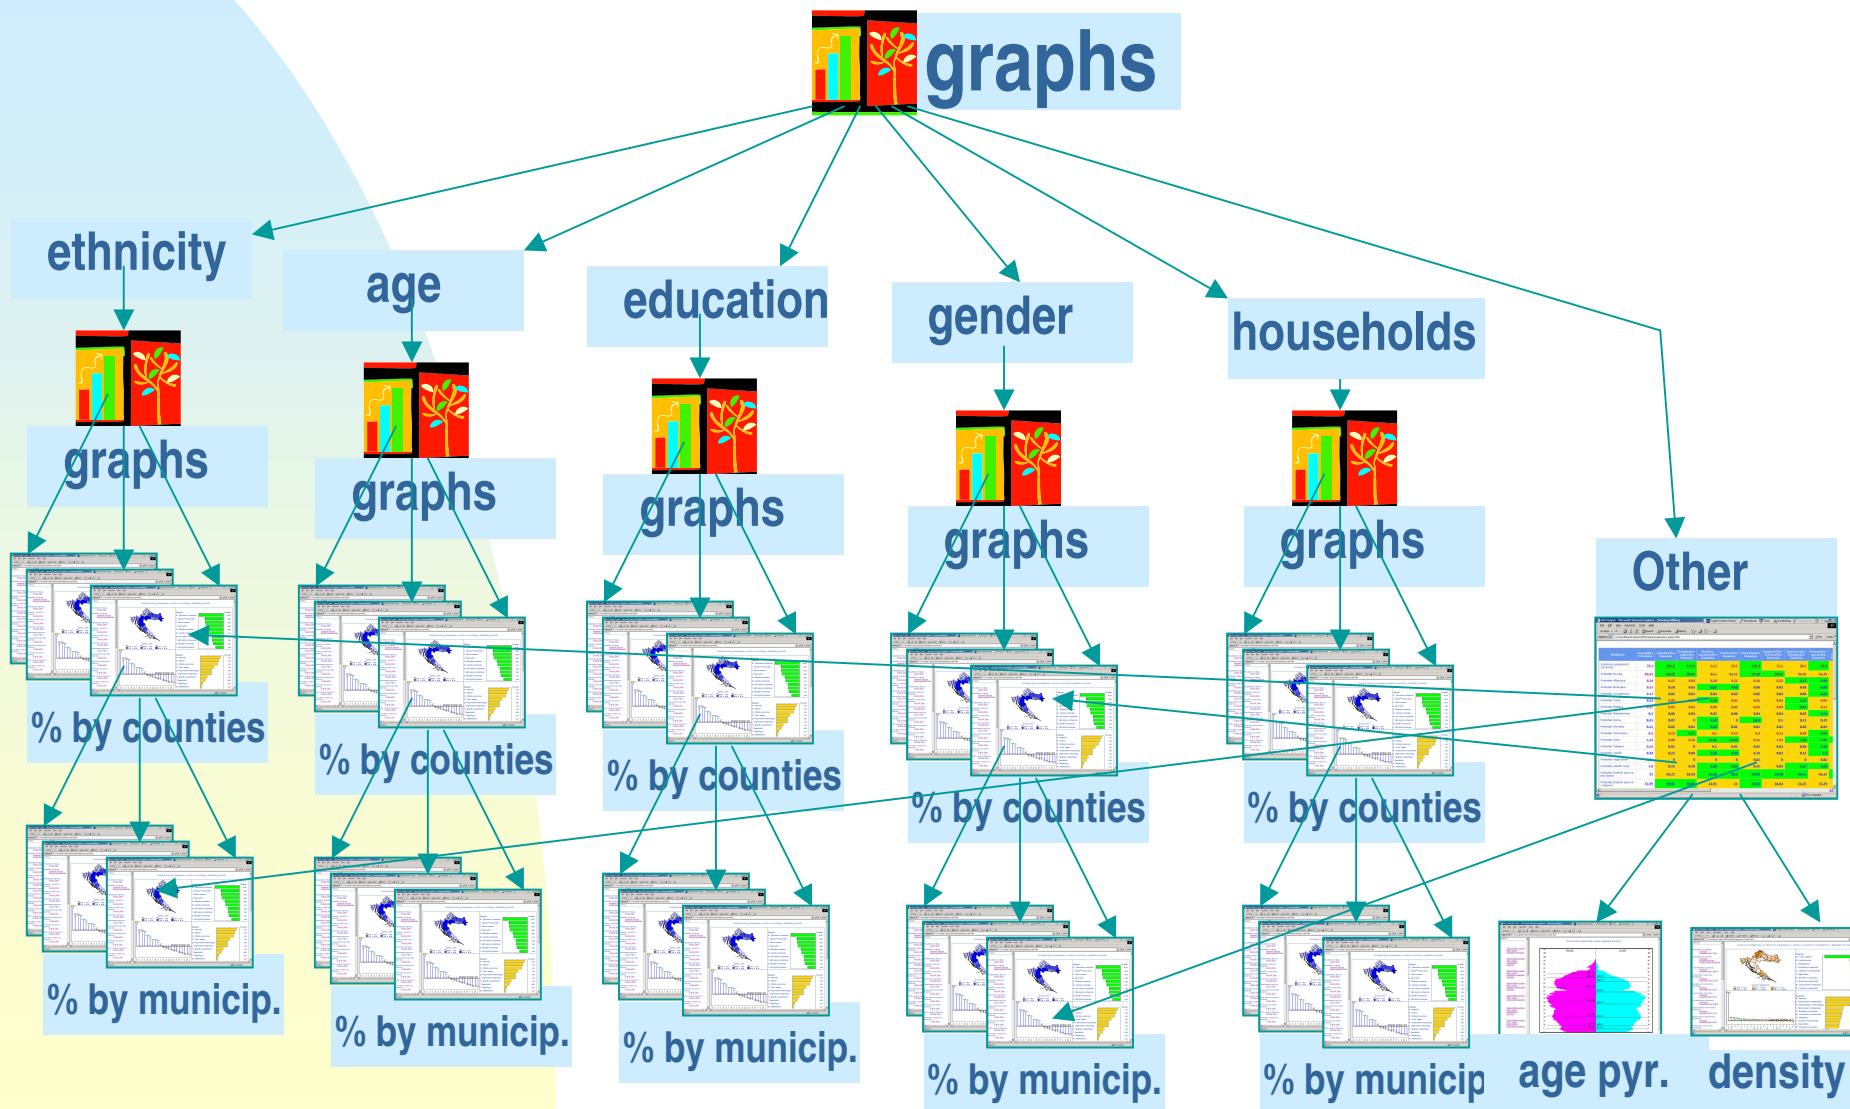

# Results: DEMO

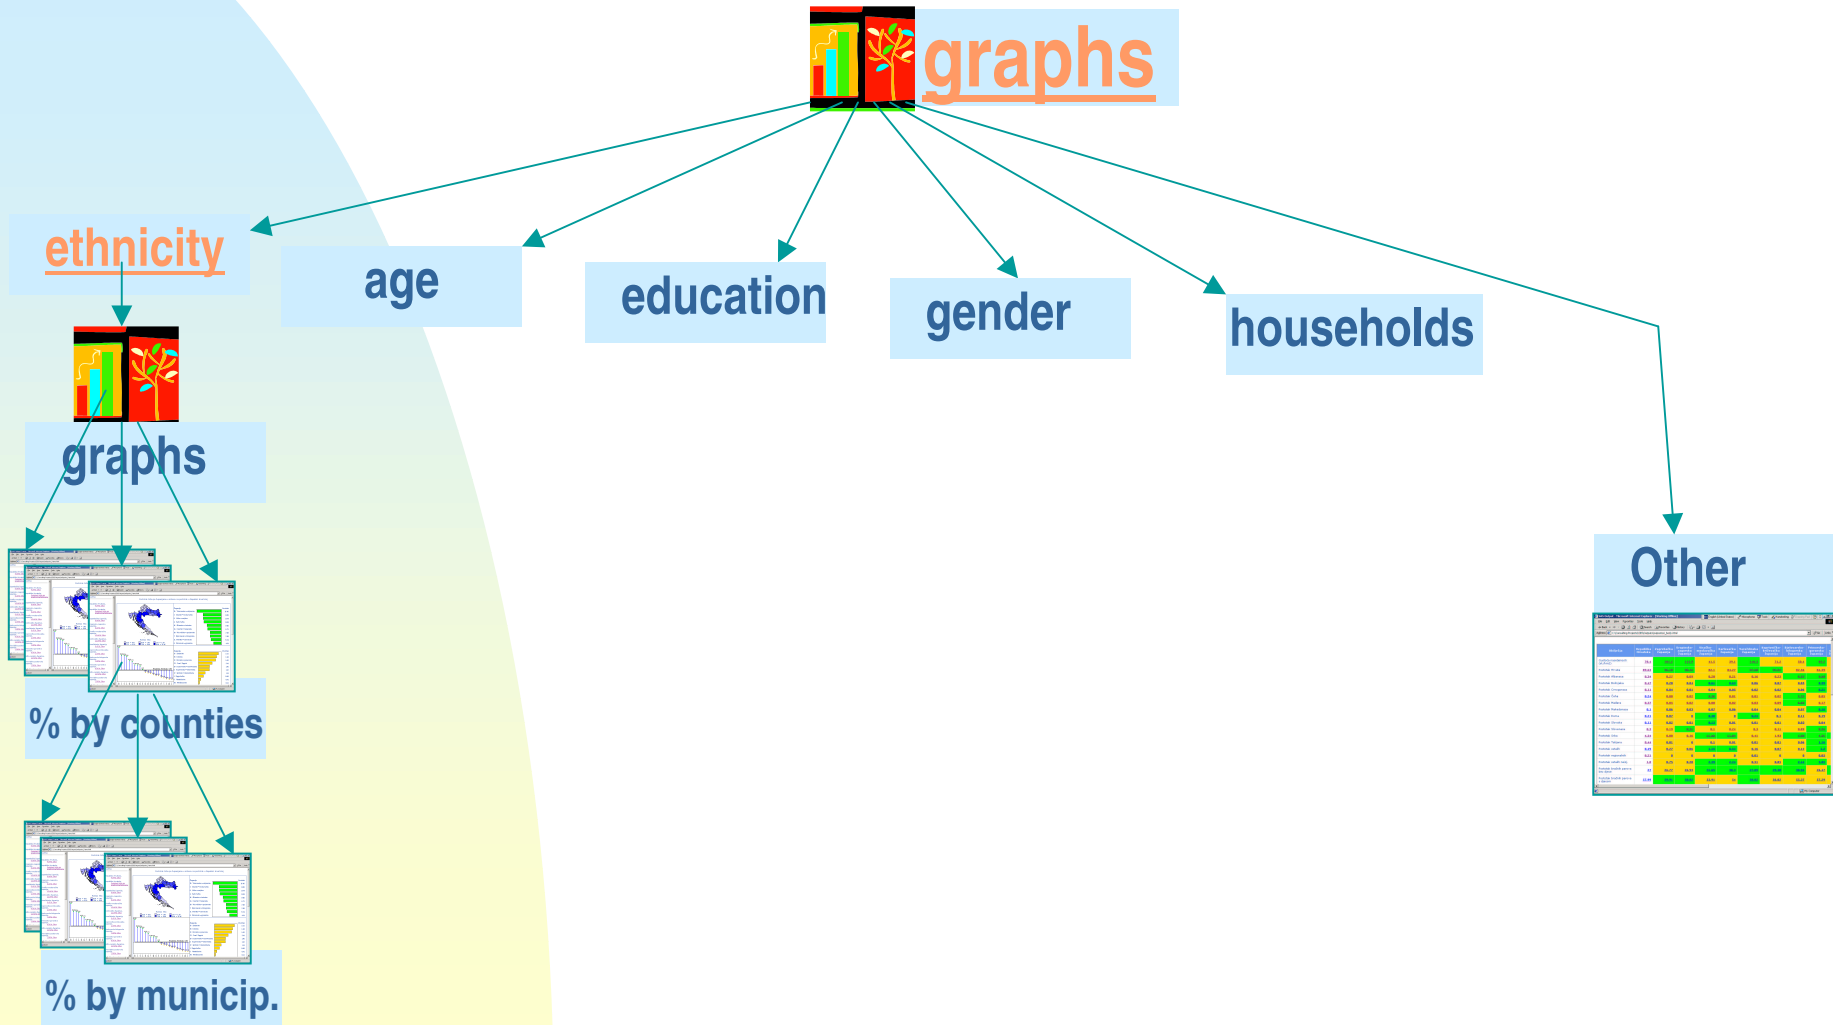

- Site map
- Ethnicity graphs and “drill-down”
- Population by education
- Main Table (“Other attributes”)
- Age pyramids
- Population density

# Conclusions

- **Aims** were accomplished due to:
  - ◆ SAS/ ODS flexibility in creating HTML linked files, tables, graphs
  - ◆ CBS staff expertise, collaboration with CAIR Research Center (<http://www.cair-center.hr> )
  - ◆ AA/ GIS data made available with the cooperation of Croatian State Geodetic Administration

# Conclusions

## ■ Limitations:

- ◆ Pilot project (time & budget constraints)
- ◆ 4 demographic tables only (more later)
- ◆ Graph types limited to maps, bar/pie/"pin" charts, pyramids (customer key needs)
- ◆ Dimensionality (1-2 variables at the time)
- ◆ GIF graphics files used only (because Java, Activex were too large and slow)
- ◆ Lowest administrative unit was municipality
- ◆ Zagreb town "quarters" AA/GIS data not available at development time

# Conclusions

- **Future developments:**
  - ◆ English version
  - ◆ Additional tables and attributes (e.g., financial/economic)
  - ◆ Multiple variable analyses/presentations
  - ◆ “drill-down” to the lower level administrative units (settlements)
  - ◆ Zagreb town quarters AA/GIS data
  - ◆ Fully functional street-level SAS/GIS?
