

Frank Zeppenfeldt works at the Telecommunications Department of ESA as a communications engineer. His interests are emerging network architectures for onboard processed telecommunication satellites and their integration into the terrestrial network. Before joining ESA, he worked at a NATO Research Laboratory where he was responsible for the technical implementation of a research network for secure collaborative experiments between NATO partners. Roberto Donadio is with ESA since 1989, first at the ESA Control Centre in Darmstadt, Germany and currently a Senior Applications and Standardization Engineer at the Research and Development Centre of ESA in Noordwijk, The Netherlands. His main research interests include multicast protocols and the support of quality of service on satellite networks. He has been actively involved in standardization matters in the ITU and ETSI and he currently represents ESA in the DVB-RCS technical committee.
