

# Network Access for Remote Users

Dr John S. Graham

ULCC

[j.graham@ulcc.ac.uk](mailto:j.graham@ulcc.ac.uk)

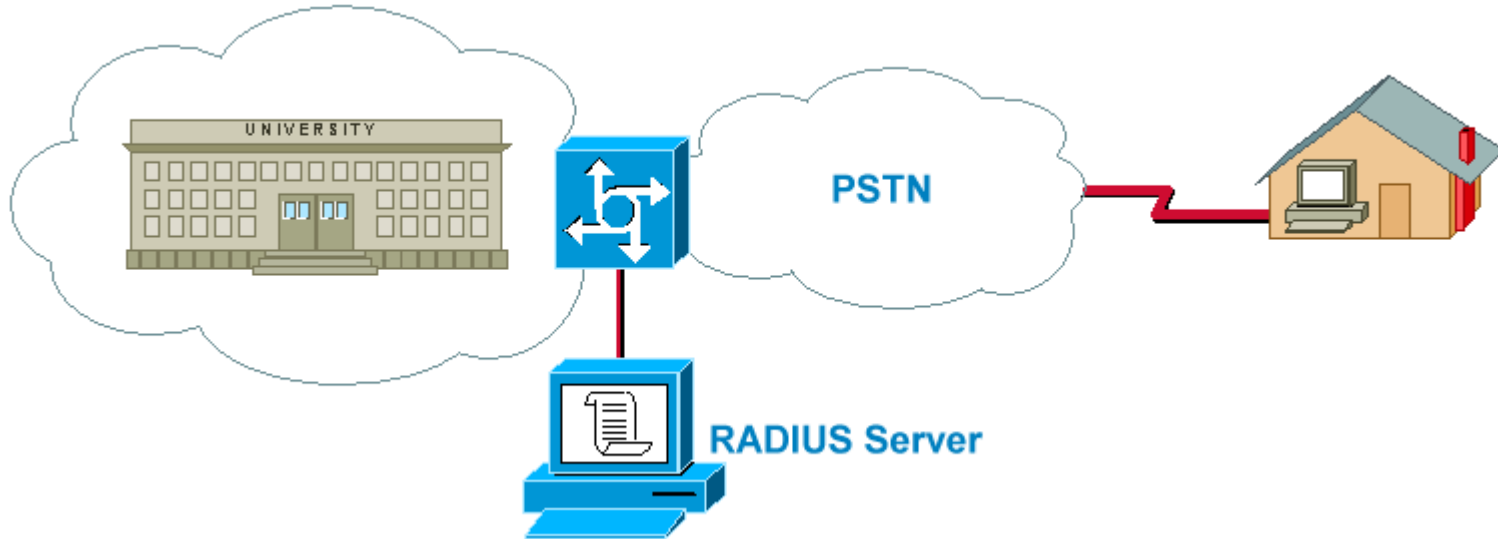

# Review of Technologies

- Remote Site
  - Private Leased Lines
    - Kilostream or Megastream Circuits
    - LES
  - ISDN
  - EPS9
  - ISP
- Remote User
  - Private Dialup Service
  - ISP

# Site-to-Site Private Infrastructure

# Traditional Dialup Service

☹️ High Costs

☹️ Support Burden

☹️ Limited to 56K Analogue Dialup

☹️ Limited Service

☺️ Security Guaranteed

# Virtual Private Network

☺ Highly Flexible Solution

☹ Complex Security Issues

☺ Uses Existing Infrastructure

# VPN Roadmap

# Tunnelling Methods

- Layer III
  - GRE
  - IPSec
- Layer II
  - L2F
  - PPTP
  - L2TP

# Layer 3 Tunneling (GRE)

passenger protocol

encapsulating protocol

carrier protocol

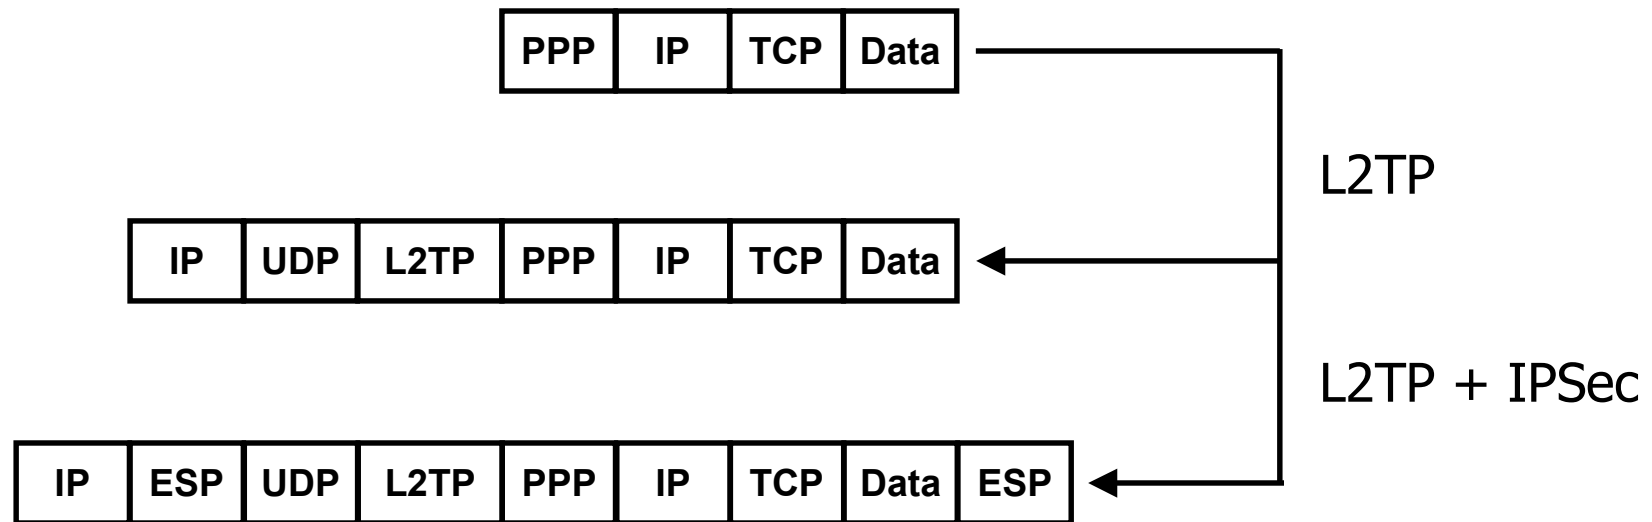

# Tunnelling In Action

IP	TCP	Data
----	-----	------

Source	62.49.38.138
Destination	192.168.17.26

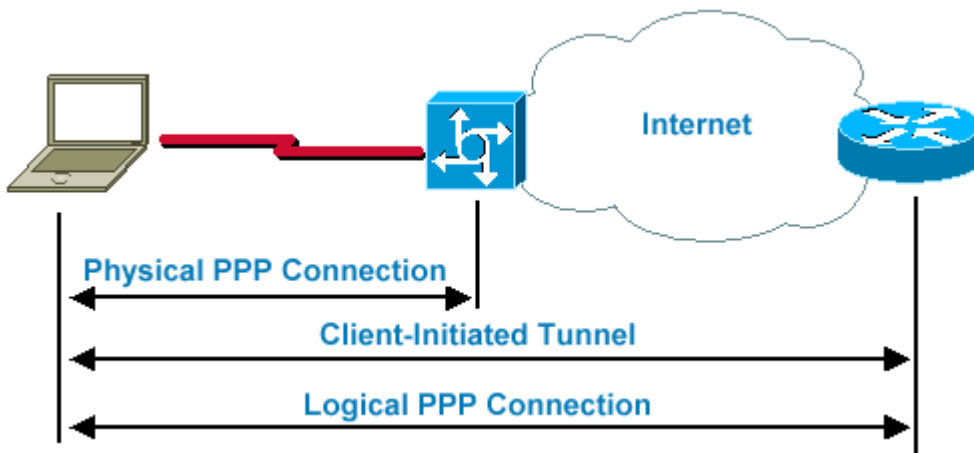

# Layer 2 Tunneling (L2TP)

# Layer 2 Tunnelling Modes

Compulsory L2 Tunnelling

Voluntary L2 Tunnelling

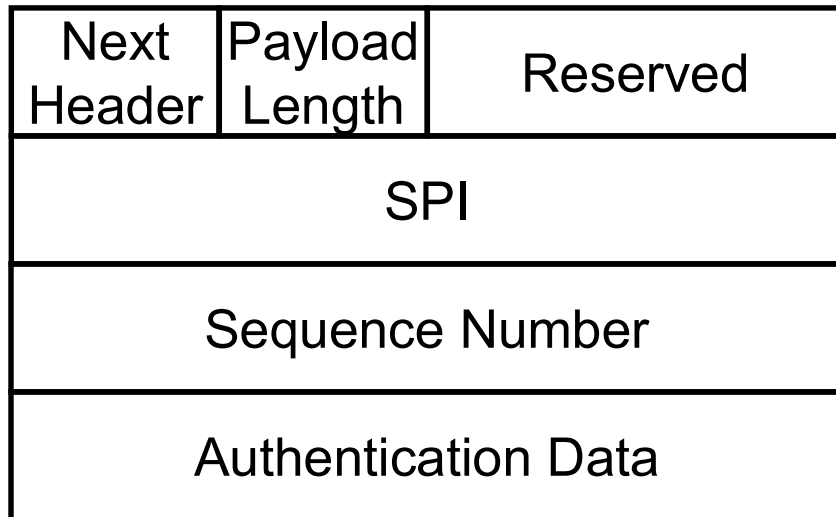

# Authentication

- Peer Identity
  - Shared Secret
  - Digital Certificate
- Data Integrity
  - Digital Signatures
- User Identity
  - Kerberos
  - RADIUS

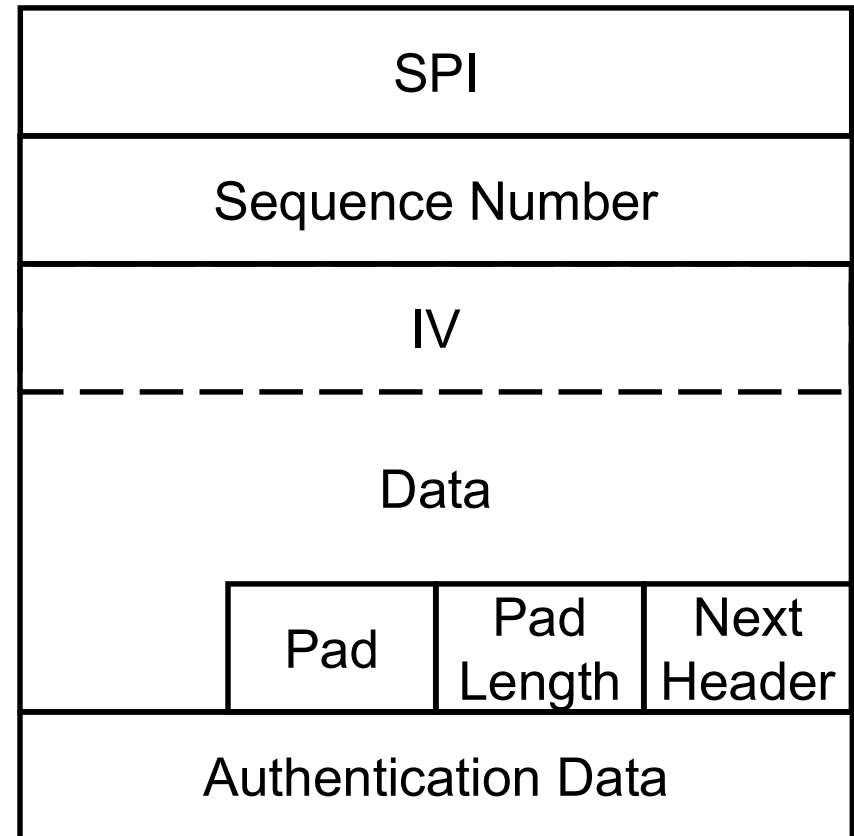

# IP Security (IPSec)

- Protocols
  - Authentication Header
  - Encapsulating Security Payload
  - Internet Key Exchange
- Modes
  - Tunnel
  - Transport

# IPSec Protocols

Authentication Header (51)

Encapsulating Security Protocol (50)

# IPSec Modes

## Tunnel Mode

IP	AH/ESP	IP	TCP	Data
----	--------	----	-----	------

## Transport Mode

IP	AH/ESP	TCP	Data
----	--------	-----	------

# Equipment at Remote Site

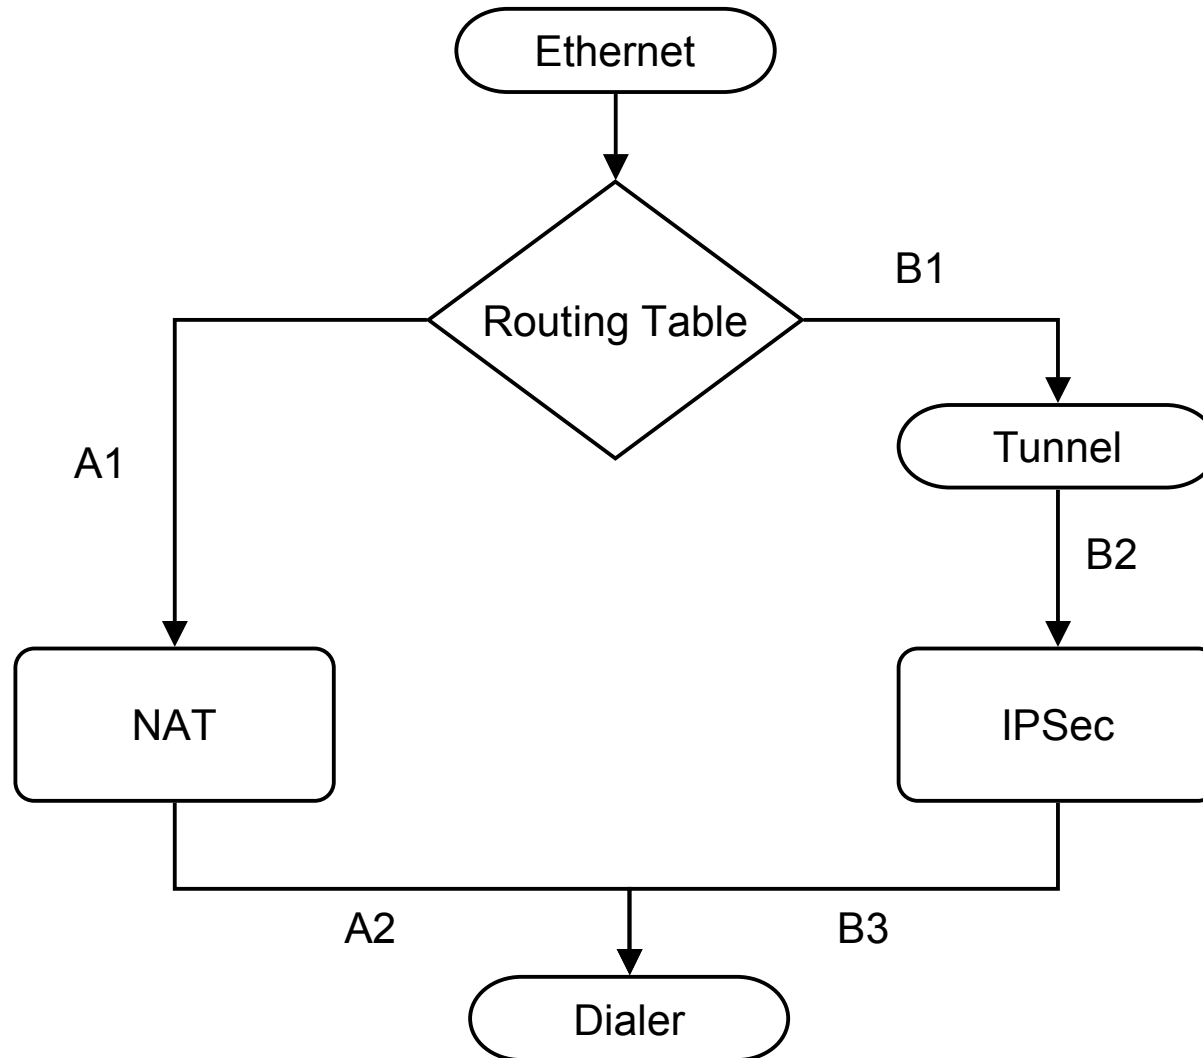

- 'Wires Only' ADSL Connection
  - One Static IP Address
- Splitter
- Cisco 827H Router
  - Ethernet hub (4 ports) plus ATM port

# Customer Installation

# Router Configuration

# IPSec Followed by NAT

- Immutable fields of outer IP header included in AH protocol's ICV data.
- Transport mode IPSec renders TCP/UDP checksums invalid.
- Multiple incompatibilities between SA parameters and NAT.
