

Interactive multimedia news presentation on very low bitrates

Igor S. Pandžić

Department of telecommunications

Faculty of electrical engineering and computing

University of Zagreb, Croatia

www.tel.fer.hr

Rich multimedia news delivery

- Animation, voice, graphics

Interactive

- News on demand

Easy access

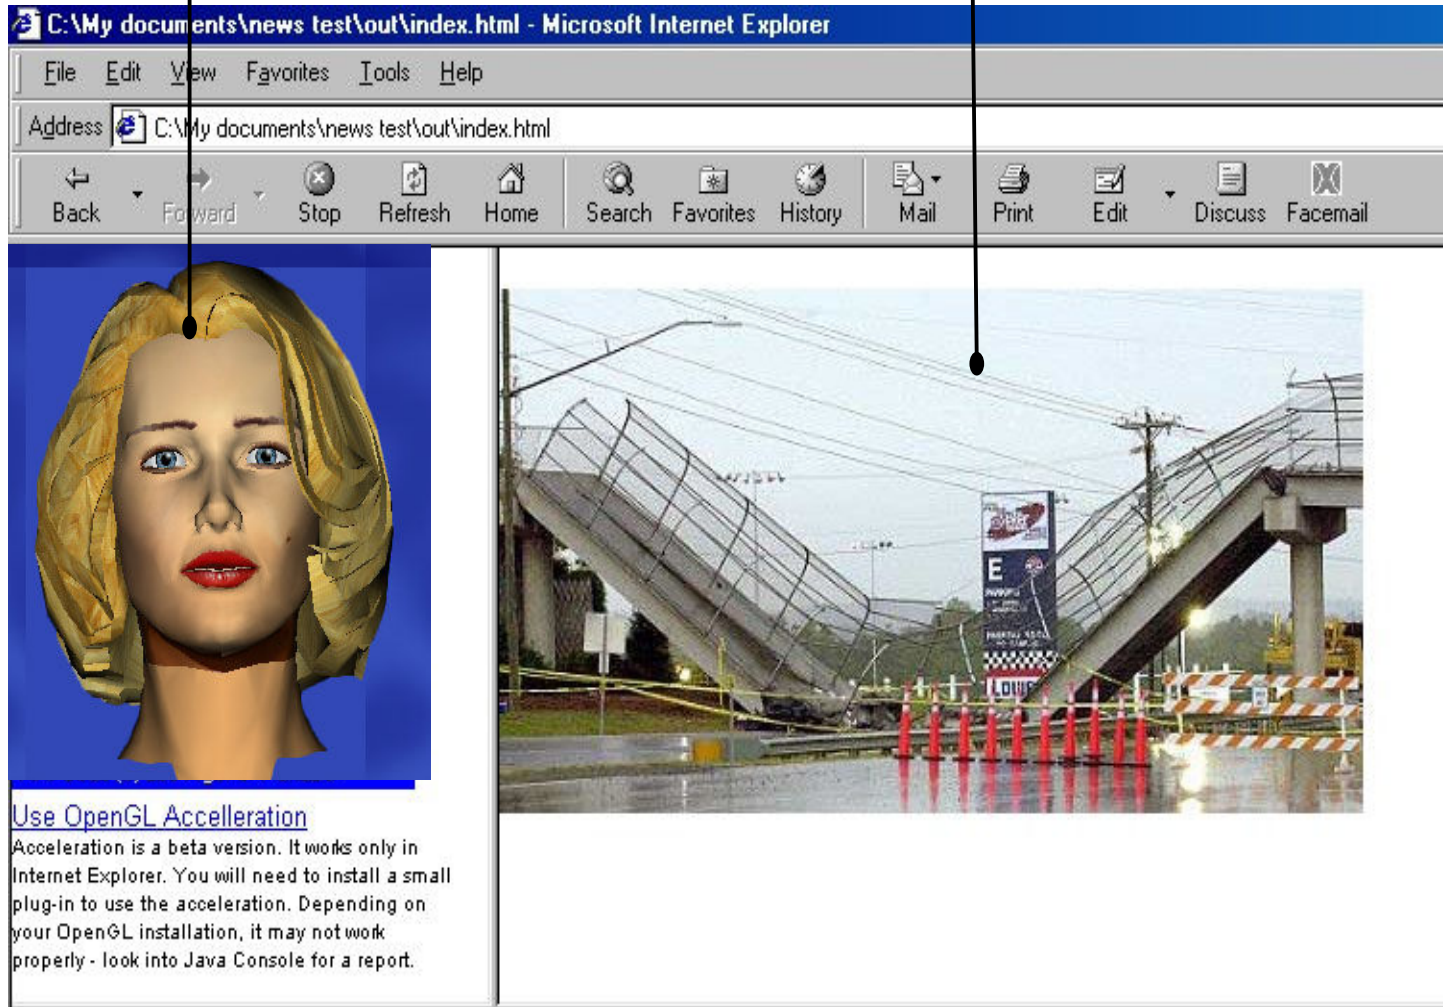

- Low bandwidth, low processing power

Automatic

- Content generation from news data base

MPEG-4 FA Player Applet

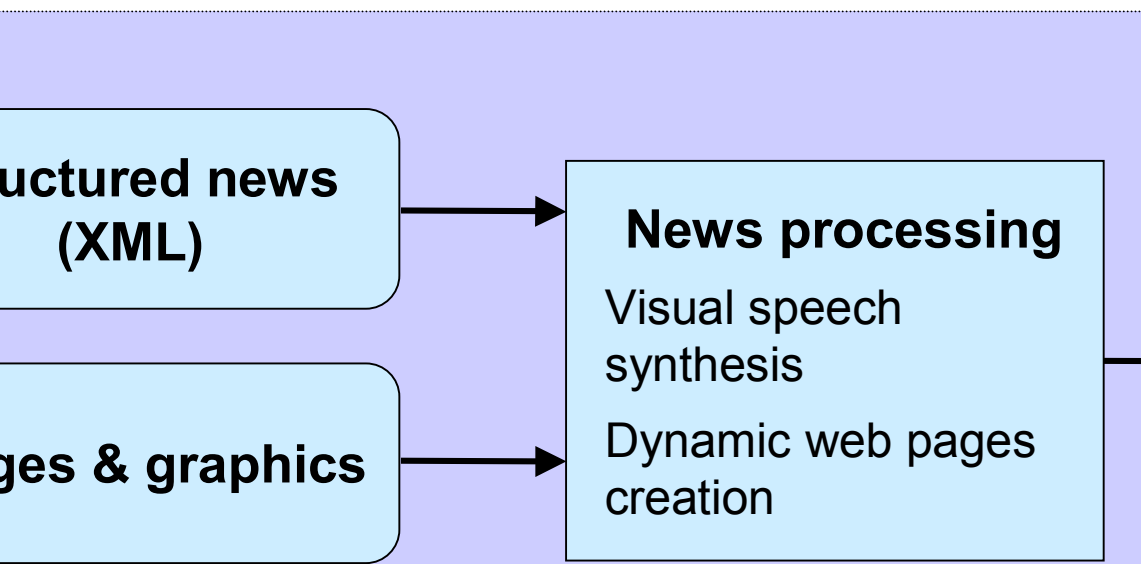

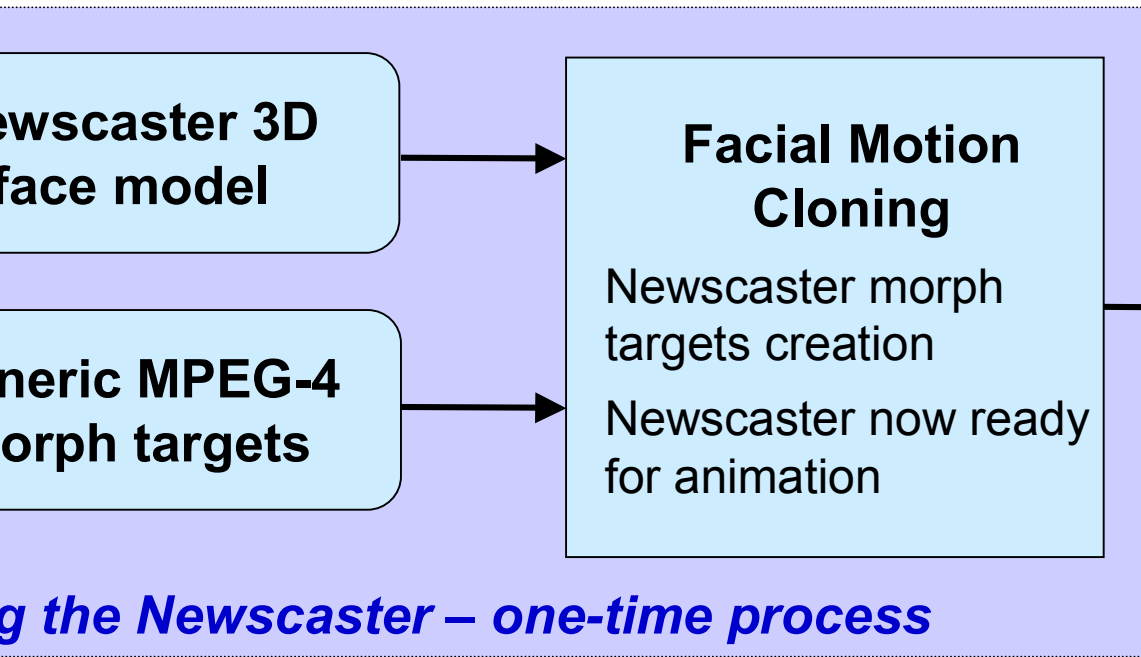

Dynamic graphics area

Choose the news from the menu:

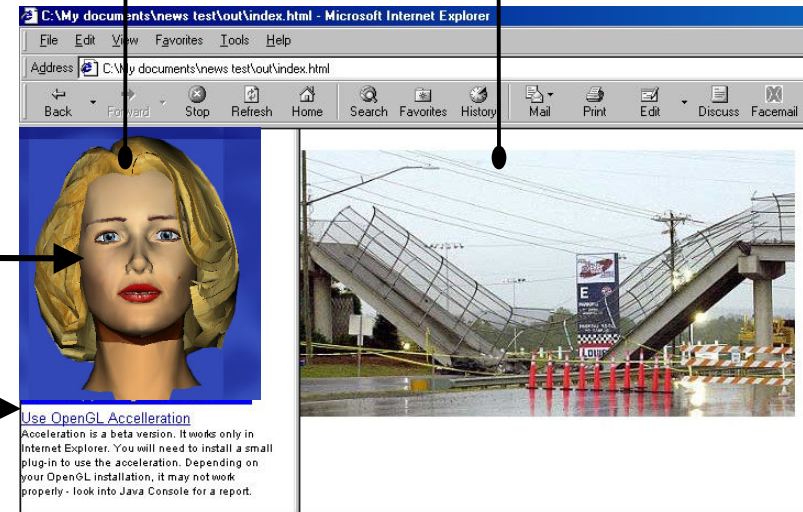

- [Headlines](#)
- [Sports](#)

News selection area

Dynamic graphics a

News selection area

Create a 3D face model
Create morph targets for the model
Construction of models and animations using standard 3D tools
Problem: morph target creation tedious
Solution: Facial Motion Cloning

Fast production of new face models for animation

Automating the **morph target** approach, the common way of animating faces

Animated Source Face

Animated Target Face

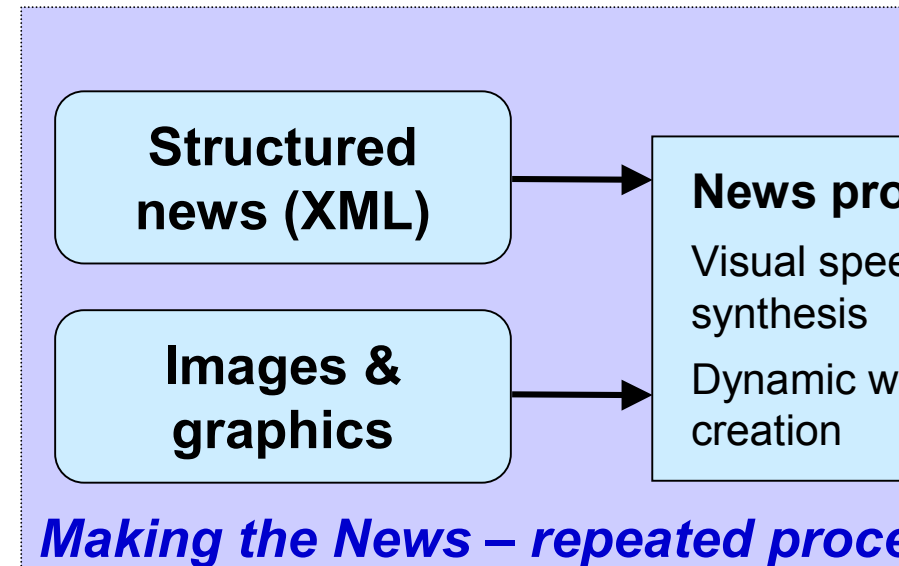

News organised by topic
in simple XML format

News items contain
references to image files

Visual speech synthesis:
create voice and
animation

Create web site structure
with appropriate links

```
<?xml version="1.0" encoding="ISO-8859-1"?>
news>
<logo>newslogo.jpg</logo>
<introduction>Welcome to the interactive news.</introduction>
<voice>Mary</voice>
<topic>
  <name>Headlines</name>
  <item>
    <text>U.S. airstrike hits Baghdad.</text>
    <image>baghdad.jpg</image>
  </item>
  <item>
    ...
  </item>
  ...
</topic>
...
news>
```

XML format can be extracted from a content management system

Structure can easily be extended

News on demand can be supported with personalised news composition

Requirements:

- Virtual newscaster (streaming face animation and audio)
- Dynamic graphics synchronised with presentation
- Must work in standard browser

ISO standard since 1999.

- Work started in 1996.

Only standard for FA

Widely accepted in academia

Spreading into industry as new products emerge

Standard also includes Body Animation

Complete

- Large range of expressions

Efficient

- No redundancy
- Compressed to low bitrates

Relatively simple

- Face animation parameters displace feature points from neutral position
- Face definition parameters allow personalisation in a scalable manner

Portable & reusable

- Animation parameters are model-independent

PEG-4 FBA decoder

Simple FA: weighted morph targets

Lightweight implementation

Easily portable to any platform

... and implementation

Zavod za teleko

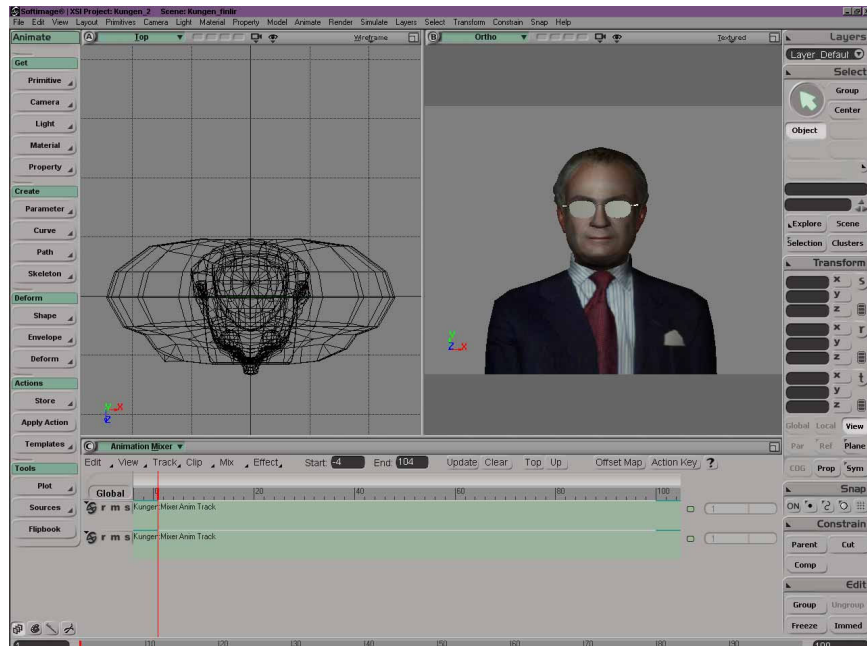

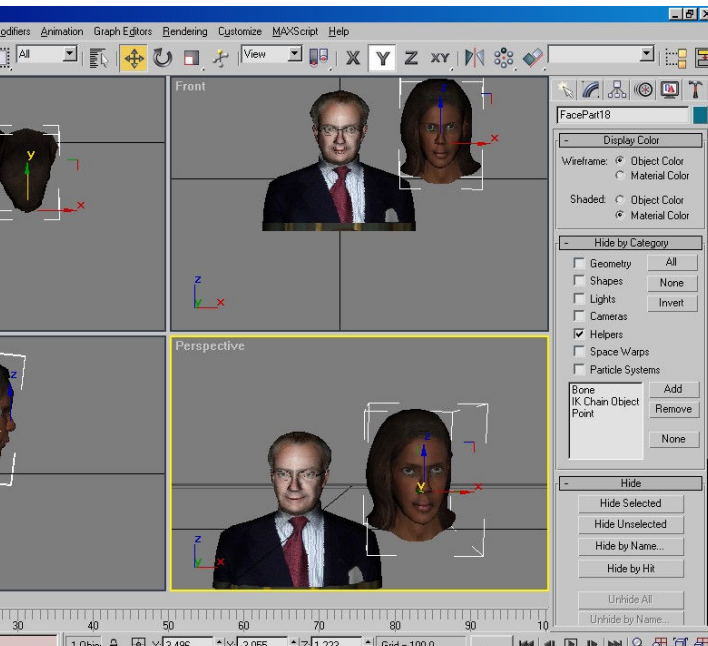

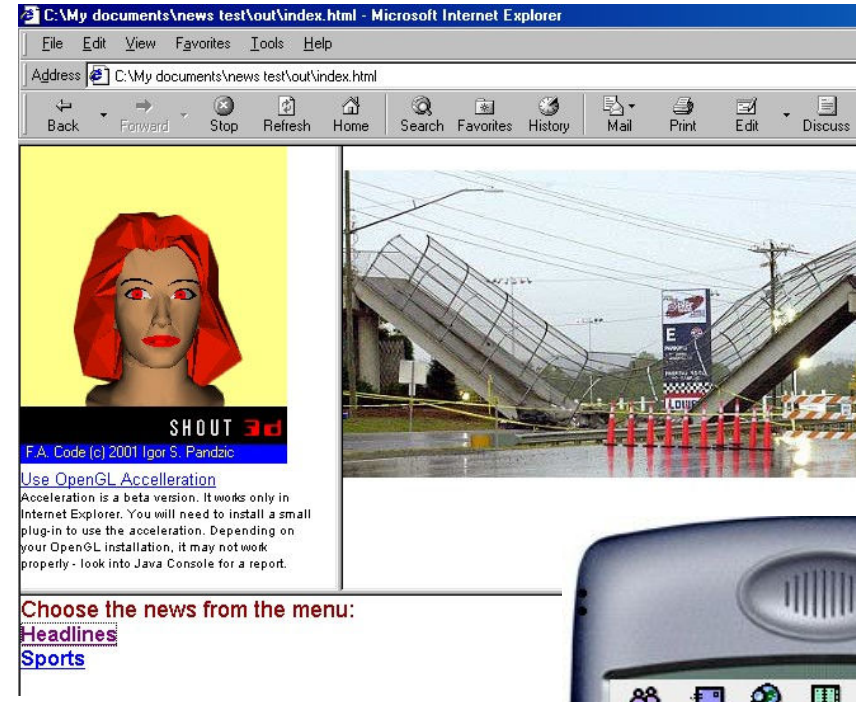

... va applet, Shout3D rendering engine

... mbian, iPAQ early prototypes

... C standalone

... s max plugin

... ftimage dotXSI export

Applet size: ~150K

FBA bitstreams

- viseme-encoded: ~0.3 kbit/s
- low-level FAPS: 2-6 kb/s

Audio (GSM) 6.4-13 kb/s

Face model ~50K reasonable

Acceptable for modem connections

Zavod za teleko

Model	Polygons	Size (KB)	Frames/second	
			C1	C2
Demy	2800	32	11,5	16
Dummy	1368	30	16,5	21
Jörgen	168	40	22	30
Candida	108	4	35	60
MIRAface	3692	67	10,5	16
Lake	16917	284	0,97	1

Acceptable for AVERAGE PC

$C1 = P3/600$

$C2 = P3/1000$

$P3/1000 = C1$
